

Task-1: Market Signal Test

Problem Identified

A lot of students feel lost when it comes to choosing the right skills for internships and placements. With so many courses, influencers, and opinions online, they often end up learning whatever seems popular instead of what actually matches their career goals. This leaves them with random skills, an unfocused resume, and low confidence during interviews.

Problem Validation

You can see this problem everywhere — in college classrooms, WhatsApp groups, and LinkedIn posts where students constantly ask, “Which course should I take?” or “What skills do companies really want?” Many students enroll in multiple online courses but don’t finish them because they lack clear direction. Even those with several certificates still feel nervous and unprepared when real interview opportunities come up. These patterns clearly show that students are confused, not lazy.

Willingness to Pay

Students are ready to pay for guidance that gives them clarity. A personalized roadmap, mentorship, resume feedback, and interview practice can save them months of confusion and increase their chances of getting selected. For many, that kind of direction feels like a smart investment in their future.

Task-2: Growth Experiment Design

Platform Chosen & Reason

- **Platform:** LinkedIn
- **Reason:** Students and fresh graduates actively use LinkedIn to search for internships and placements. Many of them openly share their career struggles, which makes it easier to reach the right audience without spending money.

Step-by-Step Outreach Plan

- Search for final-year students and recent graduates using keywords like “*looking for internship,*” “*open to opportunities,*” or “*final year student.*”
- Send **20–25 personalized connection requests per day** with a short and friendly note.

Connection Note Example:

"Hi [Name], I came across your profile while looking at students preparing for internships. I'm talking to a few students about career planning and skill direction, so I thought of connecting."

- After they accept, send a follow-up message within a day.

Follow-up Message:

"Thanks for connecting! I'm offering a free 15-minute career clarity chat where I help students figure out which skills to focus on based on their goals. Let me know if you'd like to join one."

Daily Outreach Count

- 20–25 connection requests per day
- Follow up with all newly added connections daily

Expected Outcome (7 Days)

- Around 140–175 connection requests sent
 - 45–65 new connections
 - 12–18 interested replies
 - 6–10 calls booked
-

Task-3: Conversion Hook

The Hook

“Spend 15 minutes with us and walk away with a clear career action plan — if it’s not helpful, you don’t continue.”

Why It Works Psychologically

This hook removes pressure and fear. Students often hesitate to pay for guidance because they worry it might not be useful. By offering value first and removing the feeling of risk, it builds trust quickly. It also promises quick clarity, which appeals to students who feel stuck or overwhelmed about their future.

Benefit for Students and the Startup

Students gain direction, confidence, and a better understanding of which skills to focus on without committing money upfront. The startup, on the other hand, attracts genuinely interested students, builds credibility, and increases the chances of converting satisfied learners into paying users through trust rather than hard selling.

Task-4: Metrics & Learning

Key Metrics to Track

- **Outreach Response Rate** – How many students reply after the first message
- **Call Booking Rate** – How many interested students actually schedule a call
- **Call Attendance Rate** – How many booked students show up for the session
- **Conversion Rate** – How many students choose to continue with paid support
- **Referral or Word-of-Mouth Rate** – How many students recommend others after the session

Actions if Results Are Poor

- **Low response rate:** Improve the outreach message to sound more personal and less promotional
 - **Low booking rate:** Make the free session more attractive by adding resume tips or a mini skill review
 - **Low attendance rate:** Send reminders and make scheduling easier with flexible time slots
 - **Low conversion rate:** Improve the clarity of benefits and share student success examples
 - **Low referrals:** Focus on delivering a better experience so students feel confident recommending it to friends
-

Task-5: Founder’s Insight

If I were the founder of an EdTech startup like NxtWise, I would focus on building a strong peer mentorship community instead of only offering courses. Students often feel more motivated when they learn from seniors who were in the same position a year or two ago. Creating small mentor-led groups can improve accountability and keep learners consistent. It also makes the platform feel more supportive and less like a one-way learning app. When students see real success stories from relatable mentors, trust grows naturally. This approach can lead to better engagement and strong word-of-mouth growth.
